RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 48 pages. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1973 Excerpt: . . . contains mica plagioclase and quartz and less hornblende. The composition of this rock is hornblende quartz diorite. It forms a part of the large mass mapped as metagabbro on the east side of the Granite Basin pluton and the border zones of metagabbro west of Hartman Bar and along Coldwater Creek. Small bodies consisting of similar metadiorite occur with metadacite in the southern part of the area. In several places, metadacite grades into metadiorite, and some of the rock mapped as metadacite is fine-to medium-grained metadiorite. These two rock types seem to be genetically related. Their mineralogy and chemistry are identical, but their textures reflect different rates of cooling. The intrusive relation between the metavolcanic rocks and metamorphosed intrusive rocks (fig. 20) is exposed on the ridge south of Catrell Creek at an elevation of 4,800 feet (east of loc. 850). Here lens-shaped and dikelike bodies of metadiorite and metagabbro...
