Excerpt: .By the term menstruation is meant the monthly hemorrhage which takes place in the uterus during the child-bearing period of the normal woman, except during pregnancy and lactation, when it is usually suspended. Menstruation is the only guide to the control of sex and for that reason each and every phase of the phenomenon should be thoroughly understood. Puberty.--The first occurrence of menstruation with the concomitant changes marks the epoch of sexual maturity at which, in the female, impregnation becomes possible. The signs (as Parvin gives them) are: The girl's pelvis enlarges and her breasts notably increase in size as she enters this period of life; the one change indicates preparation for childbirth, the other provision for the nourishment of the newborn. The external genitals are developed, and hair grows upon the mons veneris and upon the labia majora; the circumference of the...
